

FROM SCHEDULING TO DOSE INJECTION

Nuclear Medicine Information System

- Schedule Interventions.
- Order & handle Dose Information.
- HL7 Inbound (optional).
- Manage Electronic Patient Health Information.

NMIS is a management system designed to fit the needs of nuclear medicine departments.

It will simplify inventory tracking and enable effortless regulatory control.

Monitor your inventory, dosing and patient information, and billing with one program. Create daily and monthly inspection reports with NMIS, to be always compliant.

NMIS is a tracking software enabling the departments to keep track of inventory, doses, patient information and billing. It includes a stock management, a patient information system, a dose management, and an order management system.

Official partner of :

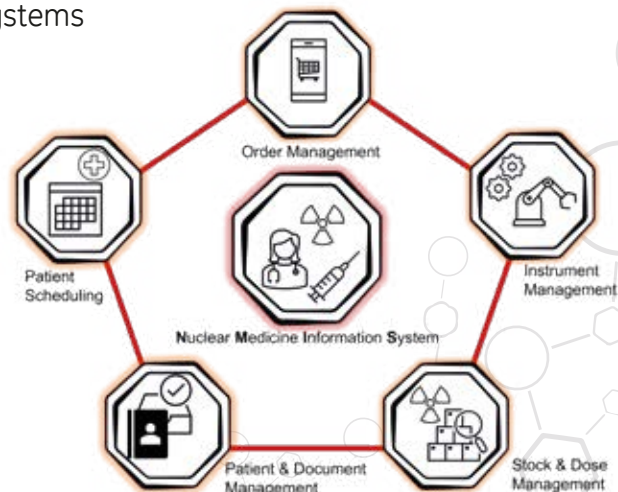

Features are:

- Access to everything from one main screen.
- Convenient shortcuts for day-to-day tasks.
- Tracking and inventory of container shipments.
- Access to satellite department data.
- Easy online tracking and ordering module.
- Specific tracking of drugs or doses from specific pharmacies.
- Ordering doses based on a patient's scheduled exam and sending notes to the pharmacy for specific orders.
- A scheduler for patient's exams with exam history to avoid conflicting procedures.
- Dose tracking from arrival disposition, with a complete digital history that documents every exam and dose that a patient receives.
- Recording of patient dose amounts, procedures, referring physicians and radioactive waste disposal.
- Easy access to information about the dose given for last patient exam or link to the previous Draw Dose record.
- Monitoring of your production and generating trending of patient volume and treatments.
- Barcode scanning, allowing individual dosing information and inventory information to be downloaded.
- An overview of all patient information with customizable column sizes and order.
- A reporting module for convenient automated daily reports and monthly record keeping.
- Reporting module for seamless daily and monthly inspection reports.
- Optional HL7 or DICOM interface to RIS or PACS systems

Main Topics

- Simplified workflow
- Streamlined record keeping
- Injection confirmation scan
- Effortless compliance
- Easy dose ordering
- Dose credits
- Inventory management

In addition to these features, NMIS is delivered with the mobile application "Injection Confirmation Scan". The mobile iOS/Android based software integrates with NMIS and allows you to confirm that the right dose is being administered to the right patient. No ePHI data is stored on your device.
